#### DETAILED ACTION

#### **Priority**

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Specification

2. The disclosure is objected to because of the following informalities: applicant should include on page 1, preceding line 1, a related applications section stating "This application is a 371 of PCT/JP00/07811 filed 11/07/2000." Throughout the specification applicant should change the symbol for degrees from " $\Omega$ " to ---  $^{\circ}$  ---.

Appropriate correction is required.

### Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

le • Application/Control Number: 09/868,907

Art Unit: 2832

Regarding claim 1, line 4, there is no antecedent basis for "joining faces." In line 5, applicant should clarify what is meant by "in this magnet roller." In lines 5-6, there is no antecedent basis for "peaks of magnetic poles." In lines 7-8, there is no antecedent basis for "the lines of extension of the joining faces." In line 13-14, there is no antecedent basis for "roller radial directions."

Regarding claim 2, there is no antecedent basis for "the angles of the orientation magnetization directions." In lines 3-4, there is no antecedent basis for "at least one set of said adjacent magnet pieces." Applicant should clarify what is meant by " $30^{\Omega}$  to  $140^{\Omega}$ ." It appears that applicant intended " $30^{\circ}$  to  $140^{\circ}$ ."

Regarding claim 3, there is no antecedent basis for "at least one set of said magnet pieces."

Applicant should clarify the structure intended by the "at least one set of said adjacent magnet pieces are made to converge towards the outside of joining face." Applicant should clarify what is intended by "of joining face."

## Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 2832

6. Claims 1-3, as best able to be understood in view of the rejections under 35 U.S.C. 112, second paragraph, are rejected under 35 U.S.C. 103(a) as being unpatentable over Kan et al. (figure 8a)[US 4,557,582] in view of Kan et al. (figures 7a-7b) and Japan 2-222110.

Kan et al. discloses a magnet roller [figure 8a] comprising:

- a shaft [9]; and
- a plurality of magnet pieces [31-34] mounted at the periphery of the shaft arranged such that the directions of the orientation magnetization of adjacent magnet pieces facing joining faces thereof coincide with roller radial directions and the magnetization converging towards the outside of the joining face.

Kan et al. (figure 8a) disclose the instant claimed invention except for: the specific arrangement of the faces of the joints between the adjacent magnets.

Kan et al. (figures 7a-b) discloses the pole pieces having differing sizes changing the magnetization of the roller [figure 7a-b].

Japan 2-222110 discloses a plurality of adjacent pole faces offset from each other.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the offset design with differing sized pole pieces, as suggested by Kan et al. (figures 7a-b) and Japan 2-222110, with the magnetization pattern of Kan et al. (figure 8a), for the purpose of controlling the magnetization density.

Art Unit: 2832

#### Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Lincoln Donovan whose telephone number is (703) 308-3111.

The fax number for this Group is (703)-872-9318.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-1782.
